Abstract

As more and more businesses are turning to wireless LAN, the potential for security breaches is increasing at a tremendous rate. The NATEA Network Security Special Interest Group therefore will hold a Wireless Security Seminar on 02/06/2003. This free seminar is open to network and security professional at NATEA, as well as general public who is interested in this topic. It is a high level overview of the security challenges that face enterprises as they expand their 802.11b wireless networks. Speaker Dr. Chiang will discuss both the threats and the business opportunities that wireless communications bring. Based on Dr. Chiang 's current research and real world experience, his presentation will provide a strong understanding the challenges that are facing to network and security professional in this new world of Internet wireless security.
